

INSTALLATION INSTRUCTIONS

Part# KPBD47HD

Input Shaft Repair Kit

For Dodge 3.9L and 4.7L Engine with 3500 New Process Manual Transmission 99-01

The prep for the input shaft repair of this kit requires two things. Remove any large burrs from the input shaft with sandpaper. Remove the needle bearing support housing out of the flywheel; it cannot be removed from behind as the housing is in a blind hole. To install the sleeve place sleeve into installer with the step toward the input shaft, then drive onto the input shaft. To install the bearing place the lip into the installer and drive into flywheel until the installer is flush with the flywheel. Install the clutch.
