Installation Instructions

BEFORE

AFTER

1. Remove the OEM pilot bearing.
2. Install the new pilot bearing using the Installation Driver with a standard bushing driver handle.
3. Insert the tapered end of the sleeve into the installation Driver tool.  
With the bushing driver handle in place, drive the sleeve on to the end of the input shaft until it bottoms out.
4. Install bearing in flywheel with knurl toward transmission.
5. When installing transmission align carefully so as to not damage bearing.
